# 引文與參考書目

## Introduction

### Citation-引文(註)

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccups, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation.

Acupuncture or acupressure at the Neiguan (PC6) point, located on the pericardium meridian, has been shown to be effective in controlling nausea and vomiting (Bai and Baron, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Lencastre *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). The mechanism is related to autonomic nervous activity (Morro and Guyton, 1996). It is speculated that the autonomic nervous activity modulation at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with depressed vagal modulation, and the restoration of vagal modulation is associated with the improvement

## 連至Web of Science 查看文章資訊

**Abstract**  
Despite the broad benefits that DNA barcoding can bring to a diverse range of biological disciplines, a number of shortcomings still exist in terms of the experimental design of studies incorporating this approach. One underlying reason for this lies in the confusion that often exists between species discovery and specimen identification, and this is reflected in the way that hypotheses are generated and tested. Although these aims can be associated, they are quite distinct and require different methodological approaches, but their conflation has led to the frequently inappropriate use of commonly used analytical methods such as neighbour-joining trees, bootstrap resampling and fixed distance thresholds. Furthermore, the misidentification of voucher specimens can also have serious implications for end users of reference libraries such as the Barcode of Life Data Systems, and in this regard we advocate increased diligence in the a priori identification of specimens to be used for this purpose. This commentary provides an assessment of seven deficiencies that we identify as common in the DNA barcoding literature, and outline some potential improvements for its adaptation and adoption towards more reliable and accurate outcomes.

**Keywords**  
Author Keywords: bootstrap; DNA barcoding; hypothesis testing; neighbour joining; reference library; species identification  
KeyWords Plus: SPECIES DELIMITATION; MITOCHONDRIAL-DNA; INTEGRATIVE TAXONOMY; TUNA SUSHI; IDENTIFICATION; SEQUENCES; CLASSIFICATION; CONSEQUENCES; PERSPECTIVE; MEMBERSHIP

## B. View Related Records

The screenshot displays the Web of Science interface. At the top, there is a navigation bar with links to 'Web of Science', 'InCites', 'Journal Citation Reports', 'Essential Science Indicators', 'EndNote', and 'Publons'. On the right side of the navigation bar, there are links for 'Sign In', 'Help', and 'English'. Below the navigation bar, the 'Web of Science' logo is on the left, and the 'Clarivate Analytics' logo is on the right. The main content area is divided into several sections:

- Search:** A search bar with the text 'Search' and a search icon. To the right of the search bar are links for 'Tools', 'Searches and alerts', 'Search History', and 'Marked List'.
- Related Records:** A section on the left side of the main content area. It shows 'Related Records: 23,604 (from Web of Science Core Collection)'. Below this, it says 'For: The seven deadly sins of DNA bar coding ...More'. There is a 'Refine Results' section with a search bar and a 'Filter results by:' section with checkboxes for 'Open Access (9,564)' and 'Associated Data (1,743)'. There is also a 'Publication Years' section with checkboxes for years from 2014 to 2018. A 'Refine' button is located at the bottom of the filter section.
- Sort by:** A section at the top of the main content area with options: 'Relevance', 'Date', 'Times Cited', 'Usage Count', and 'More'. A dropdown menu is set to 'More'. To the right of the sort options is a page indicator: 'Page 1 of 2,361'.
- Results:** A list of three search results. Each result has a checkbox, a title, authors, journal information, and a 'View Abstract' link. The first result is 'The Pfam protein families database' by Punta, Marco; Coggill, Penny C.; Eberhardt, Ruth Y.; et al. The second result is 'BOLD: The Barcode of Life Data System (www.barcodinglife.org)' by Ratnasingham, Sujeevan; Hebert, Paul D. N. The third result is 'Microbial diversity in the deep sea and the underexplored "rare biosphere"' by Sogin, Mitchell L.; Morrison, Hilary G.; Huber, Julie A.; et al. Each result also has a 'Free Full Text from Publisher' link and a 'Usage Count' link.
- Right Side:** A section on the right side of the main content area. It contains a 'Citation Report feature not available. [?]' link, an 'Analyze Results' link, and a list of statistics for each result: 'Times Cited: 2,679 (from Web of Science Core Collection)', 'Cited References: 29', 'Shared References: 1', and 'Usage Count'. The second result has 'Times Cited: 2,086 (from Web of Science Core Collection)', 'Cited References: 25', 'Shared References: 1', and 'Usage Count'. The third result has 'Times Cited: 2,034 (from Web of Science Core Collection)', 'Cited References: 45', and 'Shared References: 1'.

A large purple banner with white and yellow text is overlaid on the results, reading: 連至 Web of Science 查看相關紀錄

**How It Works**

With a few key pieces of information—your title, abstract, and references—we can help you find the right journal for your manuscript.

Our patent—pending technology analyzes millions of data points and citation connections from the Web of Science to identify meaningful relationships between these publications and your own citation data.

Within seconds, you'll have JCR® data, key journal information and publisher details at your fingertips to help you compare your options and submit your manuscript.

Only Clarivate Analytics can harness the power of Web of Science to support your manuscript publication decisions.
